Nashville, Tennessee 37243

**Re: Rutherford County Landfill Quarterly Status Report
Murfreesboro, Tennessee**

Dear Mr. Majors:

As you requested during our March 27, 2013 meeting, the Rutherford County Solid Waste Department is pleased to submit this quarterly status report documenting the response actions taken at the Class I (SNL75-103) and Class III/IV (DML75-0047) landfills located at 6000 Landfill Road in Murfreesboro. This quarterly report documents the actions taken by the Rutherford County Solid Waste Department between July 1 and September 30, 2013.

Final Cover

TriAD Environmental Consultants, Inc., (TriAD) had previously designed improvements to the storm water benches on the cap of the closed Class I landfill. These improvements included creating breaches in the existing benches to promote positive drainage to the perimeter ditches, thereby reducing the potential for infiltration through the cap. As we discussed, modification of these benches are considered normal cap maintenance and do not require a permit modification. On August 28, Rutherford County, TriAD, and Tennessee Division of Solid Waste Management (TDSWM) personnel met at the landfill and identified locations where these breaches would be installed. Between September 24 and September 26, Rutherford County personnel installed the letdown breaches. During this time, erosion control matting was also placed and disturbed areas were seeded.

Leachate Recovery

As previously reported, the leachate sump at the toe of the Class III/IV landfill was completed in June 2013. Leachate that had accumulated in the sump was sampled on

July 1, 2013. These results were submitted to TDSWM on July 23, 2013. On August 28, an additional sample of the leachate was collected for analysis. The results of this second sampling event are attached.

On July 31, 2013, the Rutherford County Solid Waste Department entered into an agreement with the City of Murfreesboro Water and Sewer Department, that allows the Solid Waste Department to discharge 200,000 gallons of leachate to the City of Murfreesboro's Sinking Creek Wastewater Treatment Plant, and allows for additional future discharges while a long term agreement is reached.

Pumping at the leachate sump began on August 8, 2013. Recovered leachate was transported in tanker trucks by Rutherford County Solid Waste Department employees to the City of Murfreesboro wastewater treatment facility for discharge. Since that time, leachate extraction has occurred two to three times per week. For each day of pumping, between 2 and 5 loads (approximately 2,000 to 2,400 gallons per load) are transported to the wastewater treatment facility. As of September 27, approximately 188,510 gallons of leachate had been extracted and discharged.

Gas Monitoring System

The second quarterly gas monitoring event was conducted on July 31, 2013. The third quarterly gas monitoring event was conducted on September 19, 2013. The results of these monitoring events were submitted to TDSWM on September 23, 2013.

July Groundwater Monitoring Event

Groundwater monitoring was conducted in July and the results were initially reported to TDSWM in a July 31, 2013 letter. The complete groundwater monitoring report was submitted to TDSWM on September 6, 2013.

MW-4R Survey

Monitoring well MW-4R was installed during the last quarter. The top of casing for MW-4R was surveyed on July 30. This information was included in the September groundwater monitoring report.

September Groundwater Monitoring Event

Groundwater monitoring for the third quarter was conducted on September 19, 2013. The results of the monitoring have not been finalized by the laboratory at the time of this letter. Once the results are received, a groundwater monitoring report will be developed and submitted to TDSWM.

Sediment Basin

Sediment Basin 2, located down gradient from the Class III/IV, was previously evaluated and determined to be undersized. The sediment basin was dewatered and the

accumulated sediment was removed. This work began on July 25 and was completed on August 17.

On July 26, TriAD on behalf of Rutherford County submitted a request for minor modification to the permit to increase the size of Sediment Basin 2. TDSWM personnel stated that the request would likely be granted; however, formal approval has not yet been obtained. Rutherford County would like to complete this construction before November, and must first obtain a construction storm water permit from Tennessee Division of Water Resources (TDWR). The Notice of Intent and Construction Storm Water Pollution Prevention Plan has been prepared and are ready for submittal upon modification approval.

Please be assured that Rutherford County is committed to working with TDSWM to address these issues. If you have any questions concerning this status report, you may call me at (615) 898-7739.

Sincerely,

Mac Nolen
Rutherford County Solid Waste Director

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAC. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable "unless qualified as 'R' (Rejected)."

Definitions

- Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.
- Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.
- Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.
- TIC - Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.
